

Press Release

Resource efficient, custom-made, energy-saving concepts in food cooling.

KB KälteBeratung is an engineering office for cooling and air conditioning technology, based in Koblenz, Germany. We design custom-made concepts for food cooling and advise operators of refrigeration and cooling systems about cost saving through correct system design.

Koblenz, 13th Feb. 2018 - Resource efficiency is the most important theme at this year's Anuga FoodTec (trade fair for international suppliers in the food and drink industry) in Cologne. From 20th - 23rd March, exhibitors will demonstrate methods of saving energy and water, as well as reducing food waste during production and storage, with product quality and safety the highest priority. The handling of perishable goods especially requires a high level of care. Raw materials need safe transportation, special storage and expert cooling. The energy required must be constantly monitored and optimized, with regard to environmental and efficiency considerations.

Individual food cooling concepts - a customized, one-stop solution.

KB Kälteberatung is a professional contact for cooling and energy technology and will be exhibiting at the Anuga FoodTec 2018. Our team of engineers - specializing in cooling and energy technology - is able to develop and deliver custom-designed food-cooling concepts for each customer, while taking into account ecological and economic considerations. KB Kälteberatung provides expert support for operators of cooling and refrigeration systems from the tailor-made planning of a new system to the refurbishment of an old one. Our focus is on operating safety and the improved efficiency of cooling systems, but especially on reducing energy usage and reduction in costs which this brings. Our engineers advise and support our customers through all phases of their project. We can assume the role of planner/ constructor. We concern ourselves with tendering as well as providing maintenance support for the liability period covered and beyond.

Hanno Gräf, CEO of KB Kälteberatung sums it up like this: “The customer wins twice: on the one hand, from optimized investment in a state-of-the-art cooling system and, on the other, from our 'one-stop' principal: one partner who can handle everything.”

Interested parties can take advantage of a visit to the Anuga FoodTec trade fair to visit our stand located in Hall **10.1, B006**. We will be happy to provide information and advice without obligation.

Hanno Gräf, CEO of KB KälteBeratung GmbH in Koblenz

The KB Kälteberatung company - a portrait

KB Kälteberatung is an owner-run engineering company with over 10 employees. It is active throughout Europe as an independent planner and consultant, specializing in industrial and commercial cooling systems. Koblenz based KB Kälteberatung's services range from planning customized, future-proof cooling-systems and coordinating their installation and calibration, to applying for subsidies. The goal of every project is to utilize suitable technical elements in order to provide a reduction in both environmental and financial pressures. Potential savings can be made, not just through the installation of new systems, but also by checking and optimizing existing ones. Reduced energy costs are the result.

The KB engineering division is also qualified in the areas of plumbing, electrical installation, airflow and heating and can therefore provide “one-stop technical building services“. From basic evaluation, through the different stages of planning and assignment, up to and including system monitoring and support, KB engineers provide a complete service according to the fee structure for architects and engineers.
